

Solutions for
Environment | Safety | Sustainability

E-Permit to Work System

The e-Permit to Work (PTW) System greatly reduces the amount of time and money an organisation spends filing forms, tag writing, paper transportation from one place to another and chasing for signatures.

ESC's e-Permit to Work (PTW) system is a secured cloud-based software and fully integrated digital platform that manages the entire work permit sequence, including permit application, assessment, and approval process, until successful job completion.

Using ESC's e-PTW system, organisations can authorise and manage the compliance of those who come on site to perform their work more effectively.
